SCA 55 BOILER WATER TREATMENTS (SCALE CONTROL & WATER HARDNESS)

A boiler is a closed vessel in which water under pressure is transformed into steam by the application of heat. Hardness salts are the cause of scale inside a boiler; if they are not prevented or removed regularly they will cause localized overheating. This can lead to tube failure (explosion risk) or a reduction in the heat transfer properties

SCA 55 is an environmentally safe, non-toxic, heavy duty, concentrated, non-foaming detergent for effective removal of all the hardness salts in the boiler or in the wide variety of the heating devices

Direction of used: 1:1 dilution with deionizer water

Packing Size: 1 liter and 5 liters
